

SQL Online Book Store Analysis

Parminder Singh

Basic Queries

- 1) Retrieve all books in the "Fiction" genre
- 2) Find books published after the year 1950
- 3) List all customers from the Canada
- 4) Show orders placed in November 2023
- 5) Retrieve the total stock of books available
- 6) Find the details of the most expensive book
- 7) Show all customers who ordered more than 1 quantity of a book
- 8) Retrieve all orders where the total amount exceeds \$20
- 9) List all genres available in the Books table
- 10) Find the book with the lowest stock
- 11) Calculate the total revenue generated from all orders

Advance Queries

- 12) Retrieve the total number of books sold for each genre
- 13) Find the average price of books in the "Fantasy" genre
- 14) List customers who have placed at least 2 orders
- 15) Find the most frequently ordered book
- 16) Show the top 3 most expensive books of 'Fantasy' Genre
- 17) Retrieve the total quantity of books sold by each author
- 18) List the cities where customers who spent over \$30 are located
- 19) Find the customer who spent the most on orders
- 20) Calculate the stock remaining after fulfilling all order

1) Retrieve all books in the "Fiction" genre.

```
SELECT * FROM Books
WHERE Genre = 'Fiction';
```

Result Grid

	7	Open-architected exuding structure	95	5	90

Result 20 x

Conclusion

This Online Book Store MIS Analytics Project leverages SQL to transform operational data into actionable business insights. The analysis uncovers strong Fiction and Fantasy performance, a loyal Canadian customer base, and total revenue of \$756.86, primarily from bulk and high-value orders. It also identifies stockouts and underperforming genres as key improvement areas. Overall, the project showcases effective use of SQL for management information reporting—turning raw data into strategic insights that support smarter decision-making and business growth.

Thank
You
